COB Workflow – Old vs New

Nov 10, 2026 · @cherry

The new workflow is Chris's workflow updated for trigger 351 only, with more safety checks. It approves only 351 and checks every finalize, but it still erases data on 27/29 claims, may leave them locked, and runs on 5 hardcoded claims. Read from the workflow JSON files only, nothing was run.

Old workflow (Chris's)

File: `cob_happy_path_live_v3` (103 nodes). It processed triggers 27, 29 and 351 the same way.

1. **Keywords:** read the Medicare Advantage keyword list from QuickBase. Stop the run if it is empty.
2. **Claims:** `fetch_claims` reads bot 1280 claims from Oracle. The query takes 20 typed claim IDs, with no trigger filter.
3. **Loop:** take each claim in turn. If a claim fails, unlock it and go to the next.
4. **Pre-checks**, in order. Any yes = transfer, report row, next claim:
    a. Claim ID starts with M → WB_MDCR_Default
    b. Header trigger 401 → WBC_MDCR_Trigger_401
    c. Manually priced → WB_MDCR_Default
    d. Dental claim → WBC_MDCR_Dental No Go
    e. BRHSPCE → WBC_MDCR_HospiceHol20days
    f. Hospice trigger → WB_MDCR_Default
    g. No EOB company name → WBC_MDCR_COB
5. **Keyword match:** split the EOB company names and match each to the keyword list. If none match → transfer to WBC_MDCR_COB without locking.
6. **Lock and read:** lock the claim, then read it with ClaimLookup (company names, lines, OI lines, attachments, header triggers).
7. **Company check**, for each company not on the list: no EOB → transfer; payer S or T → transfer.
8. **Not all matched:** partial or none → transfer to WBC_MDCR_COB, then unlock.
9. **All matched:** erase the OI lines and delete the EOB attachments.
10. **Approve:** build approvals for 27, 29 and 351 on the lines and header. If any header trigger can't be approved → unlock and skip (after the erase).
11. **Finalize:** submit with ClaimReprocessing (forceReprocessing true), unlock, write a "completed" report row.

12. **Report:** write the report to QuickBase as a dry run (nothing saved).

New workflow

File: `cob_happy_path_live.workflow (1).json`, version 0.2.0 (3,100 lines). Built for trigger 351 only.

1. **Keywords:** same as old.
2. **Claims:** `fetch_claims` takes 5 typed claim IDs. Its comment says trigger-based selection still has to be restored.
3. **Loop:** same, plus a failed claim is unlocked and gets a "Failed" report row.
4. **Pre-checks:** same 7 checks, same order.
5. **Keyword match:** same. None match → transfer without locking.
6. **Lock and read:** lock and ClaimLookup, then a new check: the claim must have attachments, each with a company name. If not → transfer and unlock.
7. **Company check:** same per-company checks. S or T payer goes to manual review (comment: until story B7).
8. **Not all matched:** same, transfer then unlock.
9. **All matched:** erase the OI lines, then look the claim up again (the erase gives the attachment a new ID). **EOB attachment delete is turned off** (`has_fresh_attachments` forced to False).
10. **Approve:** only 351 is approved (code domain ExceptionDomain).
    a. A line or header with 27/29 → transfer to WBC_MDCR_COB, report row. No unlock step.
    b. Any other header code that can't be approved → unlock and skip.
11. **Finalize and verify:** submit with ClaimReprocessing, then `verify_lookup` reads the claim back. Final with triggers approved → unlock, "completed" row. Otherwise → unlock, "Failed" row.
12. **Report:** write to QuickBase for real (`dry_run` false, can be overridden by a setting), build an Excel report and email it (email still a dry run with a placeholder recipient). Failed rows are written separately.

What differs

Of 13 phases, 5 are the same, 5 changed and 3 still have issues.

Phase	Old (Chris's)	New	Result
Keywords	QuickBase list, stop if empty	Same	Same

Phase	Old (Chris's)	New	Result
Claim selection	20 typed IDs	5 typed IDs	Issue
Pre-checks	7 checks	Same order	Same
Keyword match	None match → transfer, no lock	Same	Same
Lock and read	Lock + ClaimLookup	Adds attachment check	Better
Company check	Per-company transfer	Same, S/T to manual review	Issue
Partial / none	Transfer + unlock	Same	Same
Erase OI lines	After all matched	Same, plus re-lookup	Same
Erase EOB	Attachments deleted	Turned off	Changed
Line approval	27, 29, 351	351 only	Better
Header approval	27, 29, 351	351 only; 27/29 transferred	Issue
Finalize	Submit, unlock	Adds verify after submit	Better
Report	QuickBase dry run	QuickBase live + Excel + email	Changed

Issues and limitations in the new version

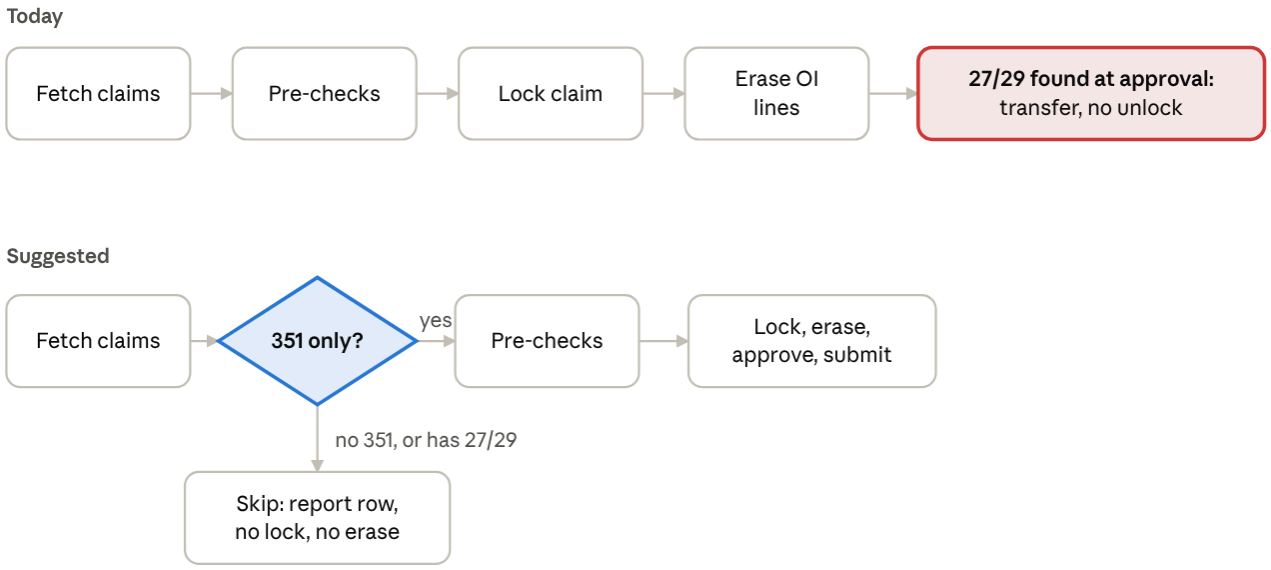

Three issues block go-live: 27/29 claims are changed before they are skipped, they may stay locked, and the claim list is hardcoded.

#	Priority	Issue	Node(s)	Why it matters
1	High	27/29 claims are not skipped at the start. If all names match, they are locked and their OI payments erased, then transferred at the approval step.	`fetch_claims`, `route_header_triggers_approved`, `route_line_triggers_approvable`	Data on descoped claims gets changed
2	High	No unlock after the 27/29 transfer. Every other transfer after a lock has one.	`transfer_triggers_not_resolved`, `transfer_header_triggers_not_resolved`	Claim may stay locked by the bot

#	Priority	Issue	Node(s)	Why it matters
3	High	Claim list is 5 typed claim IDs.	`fetch_claims`	Can't run on real daily claims
4	Medium	EOB attachment delete is turned off. Comment: deleting it released a QA2 claim without approval.	`has_fresh_attachments`	BRD expects OI lines and EOB both erased
5	Medium	`transfer_no_eob` runs once per company, so one claim can be transferred more than once.	`transfer_no_eob`	Duplicate transfers and log notes
6	Medium	S/T payer goes to manual review; comment says BRD step 6d wants erase and finalize (waiting on B7).	`transfer_secondary_payer`	Differs from the BRD
7	Low	Partial-match remark says "All company names not found".	`transfer_partial_match`, `report_row_completed_partial_match`	Misleading text for the person who picks it up
8	Low	Comment says retries raised to 2 (later 3), value is 1.	`finalize_claim`	Not clear which is intended
9	Low	27/29 workbasket marked "ASSUMPTION: WBC_MDCR_COB".	`transfer_triggers_not_resolved`	Claims could go to the wrong team
10	Low	Description still says Triggers 27/29/351.	`description`	Out of date
11	Low	Email report has a placeholder recipient and is a dry run.	`email_daily_report`	No email is sent
12	Low	Open defects D30 (no owner or workbasket check) and D31 (lock success not reliable).	Notes in the file	Bot could pick a claim someone is working

Suggestions to fix

Move the 27/29 check to the start, before any lock or erase

where the 27/29 check sits today vs suggested

Checking for 351 right after `fetch_claims` means a 27/29 claim is never locked or erased, which also removes the missing-unlock problem for those claims.

#	Issue	Suggestion
1	27/29 not skipped at start	Add an `if_else` right after `fetch_claims` (or filter in the query) so only 351 claims without 27/29 go on. Business to confirm what to do with a claim that has 351 and 27/29 together.
2	No unlock after 27/29 transfer	Add an unlock after both transfers, or confirm the transfer releases the lock. Fix 1 makes this path rare.
3	Hardcoded claim list	Restore the selection query with a 351 filter, then test on agreed QA2 claims.
4	EOB delete turned off	Confirm with business it is agreed for now; track the HealthEdge release problem as its own story.
5	Repeated transfers	Transfer once after the company loop, or stop the loop at the first transfer.
6	S/T payer to manual review	Confirm it is accepted until story B7 is done.

#	Issue	Suggestion
7	Wrong partial remark	Change to "Some company name(s) not found on keyword list".
8	Retry comment vs value	Confirm the intended max_attempts and fix the comment or the value.
9	Assumed workbasket	Confirm WBC_MDCR_COB with business.
10	Old description	Update to trigger 351 only.
11	Email not set up	Add real recipients and turn off dry run before go-live.
12	D30, D31	Track both as go-live blockers.
